

# CARE & MAINTENANCE

## HomePlus Balustrades

Aluminium and glass balustrades are low maintenance, (compared to other materials such as wood), but still require some general cleaning to preserve their good looks.

### MAINTENANCE:

The maintenance of aluminium and glass balustrades are both similar and the recommended cleaning schedule is identical. In urban areas cleaning should take place every three months and every rural areas every six months. In industrial and marine environments (within 1km of the sea), cleaning with a cold water wash should be monthly, as well as six monthly with a warm water detergent wash.

Regular visual inspections will help to identify and fix any issues before they could become serious and should be done every few months.

### CLEANING:

**ALUMINIUM:** The care & maintenance of your powder coated balustrade is available on the rear of this card.

**GLASS:** Cleaning your glass balustrade panels is similar to how you would clean most household glass.

- 1 - Wash down with clean water to loosen any residues, deposits or dirt.
- 2 - If needed, wipe with a mild detergent and a soft cloth.
- 3 - Rinse off with lots of clean water, to ensure that all detergents and grime are rinsed off.
- 4 - For a streak free finish, you can dry the glass with a soft cloth.

**DO** make sure the glass is cool to touch when cleaning; do not clean while in the direct sunlight.

**DO NOT** leave any cleaning solution on the glass sealants for long periods.

**DO NOT** use abrasive cleaning solutions or materials.
